BOYD Experience Profile
 Page 2

We have extensive experience with domestic and international mining operations and in preparing Competent Person's Reports (CPR), Qualified Person's Reports (QPR), and Independent Technical Reports (ITR) for international financing purposes and for stock exchange filings. We are fully knowledgeable of the listing requirements of the Hong Kong Stock Exchange (HKEx), London Stock Exchange (and AIM), Australian Stock Exchange (ASX), Toronto Stock Exchange (TSX), and Singapore Stock Exchange (SGX). These exchanges generally require technical reports to comply with internationally recognized reporting guidelines such as NI 43-101 (Canadian Requirements), Australasian Code for Reporting of Exploration Results, Mineral Resources, and Ore Reserves (JORC Code), and US Securities and Exchange Commission (SEC) Guide 7 Rules, etc, with regard to mining operations.

We have worked with and/or for virtually all of the major international banks, and many investor syndicates, private equity funds as well as family offices. Numerous financial agencies have used our services to opine on major property/mine operations and prepare bankable documents accepted and used with confidence by major financial institutions and other investors around the world. Not only are our services engaged for due diligence analysis and operations assessments, increasingly we are being asked by financial houses for technical "work-outs" of troubled investments.

Finally, our services are frequently engaged by the legal profession for Expert Technical Analysis and Reports and Expert Witness testimony. Client companies include many of the largest law firms in the world. Our experience spans dozens of cases in state, and federal jurisdictions, as well as many international venues, including ICSID Tribunals.
